▼ Return			
INVERTER_CONTROL	Void		

The screenshot shows a PLC ladder logic diagram with a single rungs containing the 'InverterControl' function block. The block is a grey rectangle with the following connections:

- Inputs:**
 - EN: Enabled (Boolean, true)
 - ID: ID (Integer, 64)
 - Run: Run (Boolean, true)
 - Request: Request (Boolean, %M250.0)
 - Disconnect: Disconnect (Boolean, false)
 - Reset: Reset (Boolean, %M250.1)
 - Inverter: Inverter (Boolean, P#DB1.DBX0.0)
 - ParamHold: ParamHold (Boolean, P#DB1.DBX84.0)
 - ParamInputs: ParamInputs (Boolean, P#DB1.DBX200.0)
 - ParamClient: ParamClient (Boolean, P#DB1.DBX580.0)
- Outputs:**
 - ENO: Enabled Out (Boolean)
 - Error: Error (Boolean, false)
 - ParamClient: ParamClient (Boolean)

The block is labeled '%FB16' and '%DB47'.

The screenshot shows a function block call for 'InverterControl' within a ladder logic network. The function block is identified by the label '%FB16' and the name 'InverterControl'. The inputs and outputs are as follows:

- EN (Enable In):** Connected to a normally open contact labeled 'true'.
- ID (In):** Connected to a constant value '64'.
- Run:** Connected to a variable '%M250.0'.
- Request:** Connected to a variable 'request1'.
- Disconnect:** Connected to a constant value 'false'.
- Reset:** Connected to a variable '%M250.1'.
- Inverter:** Connected to a variable 'SKID2'.Inverter'.
- ParamHold:** Connected to a variable 'SKID2'.Params_Hold'.
- ParamInputs:** Connected to a variable 'SKID2'.Params_Inputs'.
- connect ParamClient:** Connected to a variable 'SKID2'.Connect_Settings'.
- ENO (Enable Out):** The output of the function block.
- Error:** Connected to a variable 'false'.

The function block is also associated with the label '%DB48' and the name 'Inverter2Control_DB'.
